

LLA Future Airspace Changes

June 2017

Version 1.0

Future Airspace Changes

We have developed a 5 year plan to update and improve all departure routes from London Luton Airport. This will involve the use of the latest GPS navigation technology allowing us to design the most environmentally efficient routes possible, which will also seek to minimise the noise impact.

It should be noted that all changes are must follow the Civil Aviation Authorities (CAA) Airspace Change Process, which includes a period of engagement, consultation and regulatory assessment by the CAA.

The Airspace Change plan can be seen on the following page and will be updated if timescales change.

Future Airspace Changes
